

Spinoza Euro Assets Strategy Fund

Fund Fact Sheet • 31 Mar 2025 • NAV: € 193.81 | \$ 209.67

SPINOZA CAPITAL

Investment strategy

The Fund pursues long-term capital appreciation by investing in equities, equity-related securities and derivatives, bonds and other listed securities that are primarily denominated in Euro.

The investment concept is based on Ben Graham's investment philosophy on market fluctuations as set out in 'The Intelligent Investor' adopted through a proprietary, rules based asset allocation model: equity exposure is dynamically increased when markets fall and decreased when markets rise relative to their estimated intrinsic value.

The investment concept is designed to capitalise on the long-term appreciation of equities while taking advantage of short and mid term market overreactions, in fact benefiting precisely from what investors are usually most afraid of: volatility.

The Fund aims to generate attractive risk-adjusted returns relative to major European equity indices.

Risk and Reward profile

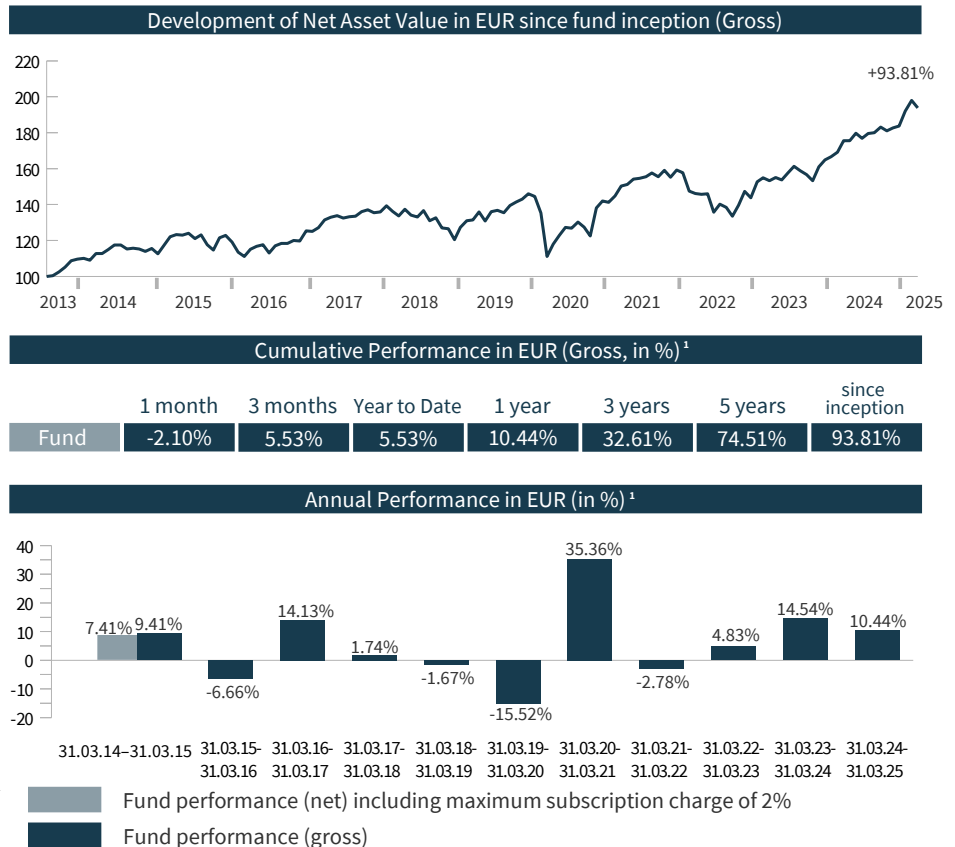

Key information

ISIN	LU1923608464
WKN	A2P966
Fund category	Balanced Fund, Europe
Domicile	Luxembourg
Fund currency	EUR
Fund inception	18 July 2013
Income type	Accumulating
Fund type	UCITS
Distribution	Germany, Luxembourg
Dealing days	Daily
Minimum investment	EUR 1'000
Financial year end	31 December
Minimum equity participation rate	25%
Management company	Gen II Management Company (Luxembourg) SARL
Investment manager	Spinoza Capital GmbH
Administrator	CACEIS Bank, Luxembourg Branch
Depository	CACEIS Bank, Luxembourg Branch
Auditor	KPMG Luxembourg

Fees and expenses

Subscription fee	0%
Ongoing charges which includes a Management fee of	1.20% p.a. 0.75% p.a.
Performance fee	up to 7.5% (perpetual high watermark)
Redemption fee	0%

Performance

¹ Gross fund performance takes into account all costs & fees incurred at fund level but excludes any subscription fees. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges), resulting in a diminishing effect on performance. These figures refer to the past. Past performance is no reliable indicator of future performance.

Fund manager's comment: March 2025

- March was a volatile month for global equity markets, largely driven by the implementation of aggressive U.S. tariff policies and their potential impact to fuel inflation, disrupt global supply chains and slow economic growth. Following the imposition of new tariffs on U.S. imports from Mexico, Canada and China in February, there was little respite in March as the U.S. administration announced new tariffs on steel, aluminium and automobiles. U.S. equity markets bore the brunt of the global sell-off, with the S&P 500 Index falling 9.4% and the Nasdaq Index falling 11.7% in March (both in EUR). European equity markets were not immune to the downward trend (e.g. Stoxx Europe 600 Index -4.2%), with export-oriented sectors such as automobiles particularly hard hit. Asian markets also felt the impact (e.g. Nikkei Index -7.5%, MSCI China Index -2.0%) as escalating trade tensions raised concerns about economic growth in the region.
- At its March meeting, the European Central Bank cut interest rates by 25 basis points for the second time this year, bringing the deposit facility rate down to 2.50%. Despite the new rate cut, European government bond yields rose sharply last month (e.g. the yield on 10-year German government bonds rose from 2.40% to 2.74% in March). The large fiscal programmes announced in Europe in recent weeks, most notably Germany's plans to spend an additional €1 trillion on defence and infrastructure, equivalent to around 25% of German GDP, have contributed to the rise in European bond yields. In contrast to Europe, U.S. 10-year government bond yields were virtually unchanged at 4.2% in March. Since the beginning of the year, they have fallen by around 35 basis points in the U.S., while they have risen by around 40 basis points in Europe.
- The Spinoza Euro Assets Strategy Fund fell 2.10% in March. While the fund was unable to escape the sharp falls in European equity markets last month, the falls were mitigated by gains in the fund's corporate bond holdings and by gains in its precious metals portfolio, with gold and copper posting robust gains in March. As most European equity markets fell sharply towards the end of the month, the fund took advantage of lower valuations to add to some of its positions (e.g. Turkey, whose stock market has fallen by more than 30% in euro terms over the past 9 months, offering an attractive risk/reward profile with a Price/Earnings multiple of around 5x). As a result of the fund's purchases, the fund's equity exposure remained broadly stable at 58%. In its precious metals portfolio, the fund took advantage of the continued rise in the price of gold to take some profits and moderately reduce its position. In the bond portfolio (36% of the fund's assets), the fund selectively extended the duration of its bond holdings to take advantage of the rise in European bond yields over the past month and lock in the current attractive yield levels.

Investor Profile

The Fund is suitable for investors seeking long-term capital growth and may not be appropriate for investors who plan to withdraw their money within 5 years.

Risks

Market risk: Market fluctuations and general market or systematic risk is inherent to an entire investment market and as such, to a varying degree, in all of the Fund's investments. Price movements in an investment market can be volatile and are influenced, among other things, by changing market supply and demand, national and international political and economic events.

Concentration risk: To the extent that the Fund's investments are concentrated in a particular country, market, industry or asset class, the Fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry or asset class.

Counterparty risk: There is a risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date. This may result in losses.

Liquidity risk: The Fund may be exposed to liquidity risk where, due to a lack of marketability, the Fund's investments cannot be bought or sold quickly enough to prevent or minimize a loss.

Derivatives risk: The Fund may use derivatives in an attempt to reduce risk (hedging) or for investment and portfolio management purposes. It may be that the use of derivatives may not always be successful and cause unit prices to fluctuate which may in turn result in loss to the Fund.

Credit risk: The risk of default that may arise if an issuer fails to make payments when due.

Operational risk: The risk of losses caused by employees, delegates, service providers and other third parties through insolvency, errors, fraud or criminal actions.
