

Spinoza Global Assets Strategy Fund

Fund Fact Sheet • 31 Oct 2025 • NAV: € 179.23 | \$ 207.88

SPINOZA CAPITAL

Investment strategy

The Fund pursues long-term capital appreciation by investing in equities, equity-related securities and derivatives, bonds and other listed securities on a global basis.

The investment concept is based on Ben Graham's investment philosophy on market fluctuations as set out in 'The Intelligent Investor' adopted through a proprietary, rules based asset allocation model: equity exposure is dynamically increased when markets fall and decreased when markets rise relative to their estimated intrinsic value.

The investment concept is designed to capitalise on the long-term appreciation of equities while taking advantage of short and mid term market overreactions, in fact benefiting precisely from what investors are usually most afraid of: volatility.

The Fund aims to generate attractive risk-adjusted returns relative to major global equity indices.

Risk and Reward profile

Key information

ISIN	LU1923620329
WKN	A2P967
Fund category	Balanced Fund, global
Domicile	Luxembourg
Fund currency	EUR

Fees and expenses

Subscription fee	0%
Ongoing charges which includes a Management fee of	1.29% p.a. 0.75% p.a.
Performance fee	up to 7.5% (perpetual high watermark)
Redemption fee	0%

Performance

¹ Gross fund performance takes into account all costs & fees incurred at fund level but excludes any subscription fees. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges), resulting in a diminishing effect on performance. These figures refer to the past. Past performance is no reliable indicator of future performance.

Fund manager's comment: October 2025

- October was a mixed month for equity markets. European and US markets delivered solid gains (e.g. Stoxx Europe 600 Index +2.5%, S&P 500 Index +2.3%), while Chinese equities fell (e.g. MSCI China Index -4.0%). The performance of developed markets was underpinned by the easing of trade tensions between the US and its key Asian trading partners, such as China, Japan and South Korea. This was supported by a solid Q3 corporate earnings season and a large number of AI-related corporate deals, signalling a US-led acceleration in AI-driven investment. In October, Nvidia's market capitalisation surpassed the threshold of USD 5 trillion for the first time. This is around 16% of US GDP and higher than the GDP of Germany.
- Meanwhile, US inflation was lower than expected last month. Although there was some evidence of tariff pass-through, its impact was more moderate than feared. Both services and rent inflation remain on a disinflationary path. This softer inflationary backdrop emboldened the Federal Reserve to deliver a further 25-basis-point cut in interest rates, bringing the target range to 3.75–4.00%. The European Central Bank kept interest rates at 2% at its meeting in October. US 10-year government bond yields fell from 4.15% to 4.08% last month, while German 10-year bond yields declined moderately from 2.71% to 2.63%. Despite the modest decline in yields, global bond markets posted a negative return last month, with the credit and securitised segments weighing on global bond markets (e.g. Bloomberg Global Aggregate Bond Index -0.3%).
- The Spinoza Global Assets Strategy Fund gained 2.89% in October. The fund took advantage of solid gains and rising valuations in selected equity markets around the world to take some profits and gradually reduce certain equity positions. For instance, the fund took profits and reduced its positions in Korea last month, following a substantial increase in the Korean equity market subsequent to the trade agreement between the US and China. The fund's equity exposure remained stable at 58% at the end of October. The fund's bond holdings (34% of the fund's assets) also performed well in October. The fund's positions in local currency emerging market bonds performed particularly well, as emerging market debt was buoyed by high real yields and falling US interest rates. The fund added to its positions in AAA-rated bonds denominated in Brazilian Real (BRL) to take advantage of the current high real interest rates on the BRL. The BRL currency area currently offers attractive real yields of 9%, with 5-year government bond yields at 14% and current inflation of around 5%. In its precious metals portfolio, the fund took some profits and reduced its silver exposure after silver's strong price performance over the last three months.

Investor Profile

The Fund is suitable for investors seeking long-term capital growth and may not be appropriate for investors who plan to withdraw their money within 5 years.

Risks

Market risk: Market fluctuations and general market or systematic risk is inherent to an entire investment market and as such, to a varying degree, in all of the Fund's investments. Price movements in an investment market can be volatile and are influenced, among other things, by changing market supply and demand, national and international political and economic events.

Concentration risk: To the extent that the Fund's investments are concentrated in a particular country, market, industry or asset class, the Fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry or asset class.

Currency risk: The Fund's reference currency is EUR, whereas the underlying investments of the Fund are denominated in a variety of currencies. Consequently, the performance of the Fund may be influenced by movements in foreign exchange rates between EUR and the currencies in which the underlying investments are denominated.

Counterparty risk: There is a risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date. This may result in losses.

Liquidity risk: The Fund may be exposed to liquidity risk where, due to a lack of marketability, the Fund's investments cannot be bought or sold quickly enough to prevent or minimize a loss.

Derivatives risk: The Fund may use derivatives in an attempt to reduce risk (hedging) or for investment and portfolio management purposes. It may be that the use of derivatives may not always be successful and cause unit prices to fluctuate which may in turn result in loss to the Fund.

Credit risk: The risk of default that may arise if an issuer fails to make payments when due.

Operational risk: The risk of losses caused by employees, delegates, service providers and other third parties through insolvency, errors, fraud or criminal actions.
