

Spinoza Euro Assets Strategy Fund

Fund Fact Sheet • 30 Jun 2026 • Net Asset Value: € 238.13

SPINOZA CAPITAL

Investment strategy

The Fund pursues long-term capital appreciation by investing in equities, equity-related securities and derivatives (e.g. financial contracts whose value depends on an underlying asset, index or rate), bonds and other listed securities that are primarily denominated in Euro.

The investment concept is based on Ben Graham's investment philosophy on market fluctuations as set out in 'The Intelligent Investor' adopted through a proprietary, rules based asset allocation model: equity exposure is dynamically increased when markets fall and decreased when markets rise relative to their estimated intrinsic value.

The investment concept is designed to capitalise on the long-term appreciation of equities while taking advantage of short and mid term market overreactions, in fact benefiting precisely from what investors are usually most afraid of: volatility.

The Fund aims to generate attractive risk-adjusted returns (e.g. returns measured relative to the level of risk taken). The Fund is actively managed and is not managed in reference to any benchmark index.

Fund performance (gross)

Gross fund performance takes into account all costs & fees incurred at fund level but excludes any subscription fees. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges), resulting in a diminishing effect on performance. The level of custody fees can be found in your bank's schedule of fees.

Fund manager's comment: June 2026

- Global equity markets performed mixed in June. US markets mostly declined due to weakness among mega-cap technology companies and hyperscalers (e.g. S&P 500 Index -1.1%, Nasdaq Index -2.8%). European markets performed mixed to positive (e.g. DAX Index -0.4%; Stoxx Europe 600 Index +2.5%), with the positive performance driven primarily by semiconductor stocks and banks. Emerging markets fell in June, with China under particular pressure (e.g. Hang Seng Index -9.1%) due to weakness in the retail and consumer sectors. Against a backdrop of diplomatic progress in the US-Iran conflict and the reopening of the Strait of Hormuz, the price of Brent crude oil fell further to \$72 per barrel, returning roughly to the level seen before the Iran war.
- Global bond markets generated negative returns in June (e.g. Bloomberg Global Aggregate Bond Index -0.7%), as the first Fed meeting under Chair Kevin Warsh was more hawkish than expected, pushing up long-dated bond yields and limiting market concerns about the independence of the US central bank. While German 10-year government bond yields have returned to their year-start level of 2.85%, US 10-year government bond yields have risen 30 basis points year-to-date, reaching 4.45% by the end of June. In June, the European Central Bank delivered its first interest rate hike after an 11-month pause, raising the deposit rate to 2.25%. Meanwhile, the Fed kept interest rates on hold at 3.50–3.75%.
- The Spinoza Euro Assets Strategy Fund gained 0.77% in June. The fund took advantage of rising valuations in selected European equity markets to realise some gains and reduce exposure to certain markets (e.g. Austria, Greece, banks). The fund's equity exposure remained stable at 59%, with portfolio sales and price rises largely offsetting each other. The fund's bond holdings (34% of assets) also contributed positively to performance in June. In its precious metals portfolio, the fund increased its holdings of silver and platinum in response to a significant fall in the prices of these metals amid more hawkish central bank policy (silver and platinum fell by 19% and 17%, respectively, in June). At the same time, the fund used the continued rise in copper prices to take some profits and gradually reduce its exposure.

Investor Profile

The Fund is suitable for investors seeking long-term capital growth and may not be appropriate for investors who plan to withdraw their money within 5 years.

Risks

Market risk: Market fluctuations and general market or systematic risk is inherent to an entire investment market and as such, to a varying degree, in all of the Fund's investments. Price movements in an investment market can be volatile and are influenced, among other things, by changing market supply and demand, national and international political and economic events.

Concentration risk: To the extent that the Fund's investments are concentrated in a particular country, market, industry or asset class, the Fund may be susceptible to loss due to adverse occurrences affecting that country, market, industry or asset class.

Currency risk: The Fund's reference currency is EUR, whereas the underlying investments of the Fund are denominated in a variety of currencies. Consequently, the performance of the Fund may be influenced by movements in foreign exchange rates between EUR and the currencies in which the underlying investments are denominated.

Liquidity risk: The Fund may be exposed to liquidity risk where, due to a lack of marketability, the Fund's investments cannot be bought or sold quickly enough to prevent or minimize a loss.

Derivatives risk: The Fund may use derivatives in an attempt to reduce risk (hedging) or for investment and portfolio management purposes. It may be that the use of derivatives may not always be successful and cause unit prices to fluctuate which may in turn result in loss to the Fund.

Credit risk: The risk of default that may arise if an issuer fails to make payments when due.

Operational risk: The risk of losses caused by employees, delegates, service providers and other third parties through insolvency, errors, fraud or criminal actions.
